

## **Browsing events :**

1. Verify that all expected content (text, images, prices, product data) is visible and rendered correctly.
2. Ensure all links, buttons, and banners on the page are working as expected.
3. Test search functionality, including handling of various keywords, special characters, misspellings, and the functionality of filters.
4. Confirm that all data is displayed accurately and consistently.
5. Check for appropriate fallback pages for load errors and correct display of error messages for incorrect inputs.
6. Assess how user-friendly and intuitive the page layout and design are.
7. Evaluate if the page is usable by individuals with disabilities.
8. If the page contains search results, test for relevance, auto-completion, correct filtering, and handling of various search terms.
9. For pages with lists of items, test pagination controls to ensure they allow users to move between pages correctly and display the appropriate data.
10. Test the functionality of any filters or sorting options to ensure they apply correctly and update the page content as expected.
11. Test with all required and optional fields filled with valid data, verifying successful sign-up and confirmation.
12. Test with missing mandatory fields.
13. Test with invalid formats for email, phone number, or date of birth.
14. Test with mismatched passwords (if a confirmation field is present).

15. Verify that a confirmation message is displayed after a successful sign-up.
16. Check for a confirmation email to be sent to the provided address.
17. Verify that the user is redirected to the correct page (e.g., events list or dashboard) after sign-up.
18. Verify that all form fields, labels, and buttons are displayed correctly.
19. Test password field length limits and character restrictions (e.g., requirement for uppercase, lowercase, numbers, and special characters).
20. Verify that the password field masks input (shows dots or asterisks).
21. Test on different operating systems (Windows, macOS, Android, iOS).
22. Increase or decrease the quantity of items in the cart and verify the total amount updates correctly.
23. Add or remove items from the cart after reaching the payment page.
24. Apply valid coupons to the cart and ensure the total amount reflects the discount.
25. Attempt to apply invalid or expired coupons.
26. Select a shipping address and ensure it is correctly displayed on the payment page.
27. Add a new address and update an existing one.

28. Verify shipping costs are calculated correctly based on the selected method and address.

29. Test with valid payment details (credit card, debit card, UPI, digital wallet) to ensure the transaction is processed successfully.

30. Test with invalid or expired card details, or insufficient funds, to ensure the transaction fails as expected and a clear error message is displayed.

31. Validate all available payment methods are functional and accessible.

32. Test with different types of payment details, including both positive and negative cases ( valid expiry dates vs. invalid ones).

33. Verify the transaction status is updated correctly for both successful and failed payments.

34. Test pending transactions and ensure they are handled and updated as expected.

### **Booking Tickets :**

1. Verify successful registration with new and existing users.

2. Test various login methods (email, phone, social login).

3. Ensure password recovery and account management work correctly.

4. Validate the display of movies based on the user's selected city.

5. Confirm that all showtimes and cinema options are accurate for a selected movie.

6. Test different filters (language, genre) and search functionality.

7. Check if the seat map is displayed correctly with clear visual cues for available, selected, and occupied seats.
8. Verify the system correctly handles the selection of multiple seats.
9. Ensure real-time updates to seat availability to prevent double-booking.
10. Test successful payment processing with different payment methods (credit/debit cards, digital wallets).
11. Verify discount and promo code application, including error handling for invalid or expired codes.
12. Confirm that the system accurately calculates the total price after discounts.
13. Check for instant booking confirmation via email and SMS.
14. Verify that users can view their booking history.
15. Test the functionality of cancelling bookings, ensuring adherence to time-based rules (two hours before the show).
16. Validate that seats are reserved for a short period (e.g., 10 minutes) if payment fails, allowing users to retry.

## **Making Payments :**

1. Verify that the integration with the payment gateway is stable and that transactions are processed correctly by the gateway.
2. Test how the system handles multiple users attempting to book the same seat simultaneously, ensuring only one booking is successful and availability is updated.

3. Confirm that the user receives a confirmation message and email immediately after a successful payment.

4. Confirm that the user receives a confirmation message and email immediately after a successful payment.

5. Verify that payment correctly reflects any applied promo codes or discounts.

6. Check that the system properly handles scenarios where a user takes too long to complete the payment process.

7. Check That Payment Gateway and And Show Payment Successful Message or Not.

8. Check Confirmation Message Show Or Not.
